Case Studies

Location Mudgeeraba, Gold Coast Queensland.

Client – Clover Hill State School.

Type of wall constructed – Vertica concrete blocks.

Brief description of work completed.

The Clover Hill State School were making a Permaculture area for the students to learn about Permaculture practices. As part of this they needed to extend the existing onsite walls to get a flat usable area. We were awarded the job and once school holidays came we got to work. We also installed the steel rails on top of the new masonry wall extension. The steel rails were salvaged from another area where they were no longer required.

See picture below.

We managed to seamlessly extend this wall and achieve the desired result for the school. What a great idea for the school to be studying Permaculture practices. The guys from Gold Coast Permaculture were also brought in as consultants on this project. Hopefully they will have an abundance of healthy food growing here in the near future.
