

Case Studies

Location- Augustine Heights, Ipswich Qld.

Client – Beach Building and Civil Group.

Type of wall's constructed – Concrete Sleepers.

Brief description of work completed.

The civil contractor had to remove an old timber wall from the boundary of this property. Then replace it with a system that had a very small foot print. Australian Retaining Walls were contracted to supply and install the new concrete sleeper wall at Augustine Heights.

Before

This wall is approximately 27 metres long x 1 metre high. The concrete piers are at 2 metre centres approx 1 metre deep and 450mm wide. The wall is backfilled with 20mm drainage gravel, geotextile fabric and an ag. pipe.

After

These concrete sleepers are also available in a limited number of coloured options.
