

## Case Studies

Location Upper Coomera, Gold Coast Queensland.

Client – Residential.

Type of wall constructed – Concrete sleepers with galvanised steel “H Beam” posts.  
Plus Boral Keystone concrete block wall at street frontage.

Brief description of work completed.

The owner of this new property was getting a house built. There was very little room down the side of the home and at the back of the home. Concrete sleepers were chosen in galvanised steel H Beam posts. The owner liked the look of the Boral Keystone concrete block wall, so it was chosen for the street frontage.

This is a view down the side of the home, where there was very little room between the home and the boundary. We can build this wall within only a 100mm footprint. See picture below.

The street front wall was built from the Boral Keystone concrete blocks to get the look the owner of this property desired. This wall was reinforced at the back with no fines concrete. Our engineer associate took care of the design and forms 15 & 16. Once again another satisfied customer and great looking walls built to last a lifetime.
